

# Terminal Block Cover

for the WireFlow Battery Monitoring and Balancing Nodes

The Terminal Block Cover is designed to provide touch protection and strain relief for the front terminal block of the WF 5218 Battery Monitoring and Balancing Node.

The cover improves installation safety by reducing the risk of accidental contact with battery connection terminals and helps secure connected wires using cable ties. It is specifically designed to fit the WF 5218 node and integrates seamlessly with the existing connector layout.

## Typical use

- Touch protection for the cell connection terminal block on WF 5218 nodes
- Improved safety during installation, commissioning and operation
- Strain relief and cable management for battery connection wiring
- Laboratory, R&D, and industrial test installations
